

An Assessment of Type-3 Clones as Detected by State-of-the-Art Tools

Rebecca Tiarks, Rainer Koschke and Raimar Falke

SCAM'09

9th IEEE International Working Conference
on Source Code Analysis and Manipulation

September 20th 2009

Clone Types

|

```
i = length (l);  
if ( i < 3 ) { ... }
```

```
i = length (l);  
if ( i < 3 ) { ... }
```

Clone Types

I

```
i = length (l);  
if ( i < 3 ) { ... }
```

```
i = length (l);  
if ( i < 3 ) { ... }
```

II

```
i = length (l);  
if ( i < 3 ) { ... }
```

```
k = length (j);  
if ( k < x ) { ... }
```

Clone Types

I

```
i = length (l);  
if ( i < 3 ) { ... }
```

```
i = length (l);  
if ( i < 3 ) { ... }
```

II

```
i = length (l);  
if ( i < 3 ) { ... }
```

```
k = length (j);  
if ( k < x ) { ... }
```

III

```
i = length (l);  
if ( i < 3 ) { ... }
```

```
i = length (l);  
f ();  
if ( i < 3 ) { ... }
```

Problem

Research Questions

Q1:Syntactic Classification Q2:Common Abstractions Q3:Code Characteristics

Q1: How can we classify detected type-3 clones in terms of syntactic differences? And how often do they occur?

Research Questions

Q1: Syntactic Classification Q2: Common Abstractions Q3: Code Characteristics

- Q1: How can we classify detected type-3 clones in terms of syntactic differences? And how often do they occur?
- Q2: What common abstractions can be assigned to the clones?

Research Questions

Q1:Syntactic Classification Q2:Common Abstractions Q3:Code Characteristics

- Q1: How can we classify detected type-3 clones in terms of syntactic differences? And how often do they occur?
- Q2: What common abstractions can be assigned to the clones?
- Q3: Are there any code characteristics that indicate that a tool-suggested clone is a real type-3 clone from a human's perspective?

System	Language	KLOC
wget	C	16
Javadoc	Java	19
bison	C	19
Ant	Java	35
snns	C	115
JDTCore	Java	148
Swing	Java	204
postgresql	C	235

Table: Systems

- five tools based on different detection algorithms
- all configured with default settings → comparability
- from Bellon Benchmark:
 - CLAN Merlo
 - Duplix Krinke
- from our tools:
 - clast
 - cscope
 - ccdimpl
- **total amount of type-3 clones: 391 628 oracled: 751**

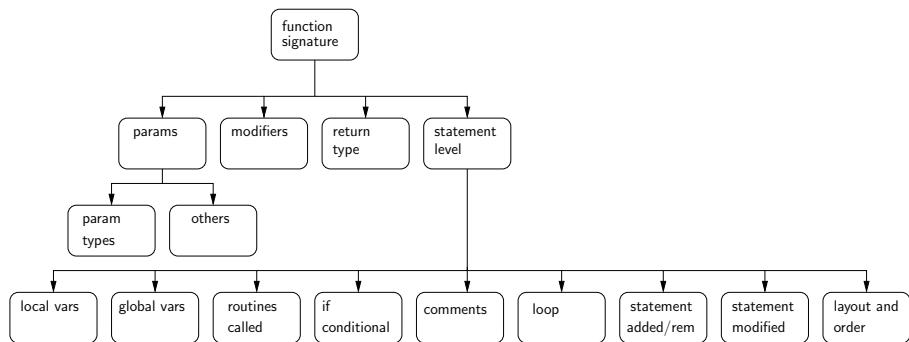

Syntactic Classification

Q1:Syntactic Classification Q2:Common Abstractions Q3:Code Characteristics

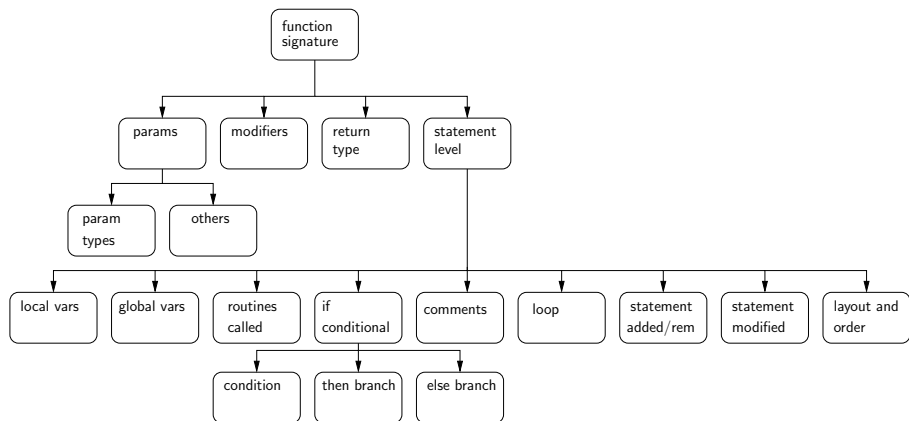

Syntactic Classification

Syntactic Classification

Q1:Syntactic Classification Q2:Common Abstractions Q3:Code Characteristics

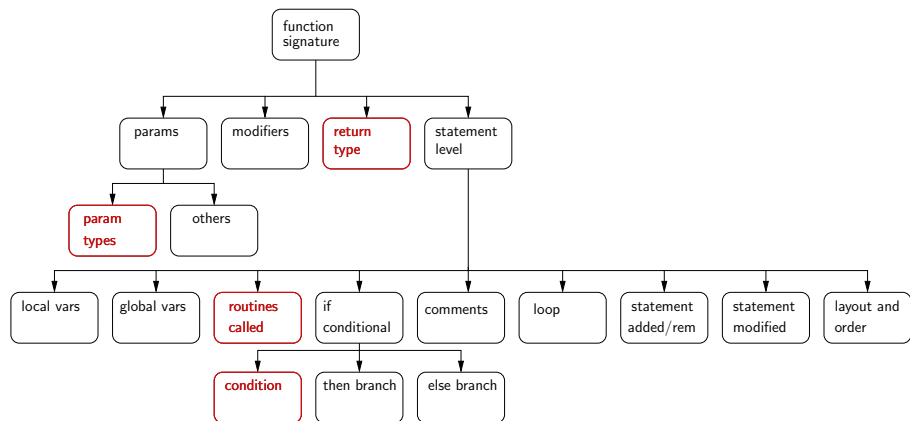

Syntactic Classification

Q1:Syntactic Classification Q2:Common Abstractions Q3:Code Characteristics

Common Abstractions

Q1:Syntactic Classification Q2:Common Abstractions Q3:Code Characteristics

- metrics used:
 - two text similarity measures
 - eight metrics per token types
 - metrics based on fragments length
- e.g., token per line, character per token, occurrence of token type, ...

Conclusion

- need to improve detection of type-3 clones
- tools using more abstraction should be able to detect and classify clones with minor syntactic differences
- text similarity can be used to filter false positives
- tools could use data mining techniques to improve detection

“Abstraction based type-3 clones can help to improve the detection, maintenance, and removal of clones”
